SV7 - Go ahead - Make me smile!!!

As an experienced Photoshop artist, Jim Parks can do any number of tricks to enhance your favorite photos. While he may not be able to make you smile on paper, he can brighten your day by electronically repairing tears, scratches, faded contrast, and in some cases faded color. Isolating a subject from its background, adding drop shadows, removing dust specks and putting your head on another person's body are also possible. Dig out those treasured or historic family photos and have them spruced up for your display shelves or as gifts. He will work on as many photos as possible in one hour from either prints (up to 8.5 x 11) which he will scan and return, or from electronic files. You will get back electronic files to print in the size you desire. To see examples, visit <http://www.jpedit.com/category/photo-restoration>.

SV11 - Cannas planted in your garden

I will plant 12 cannas in a prepared spot at your home or other location within 25 miles of the church. Cannas are tropical flowers, the variety I have grows to about 5 feet high with broad sword-like leaves and spikes that produce brilliant scarlet flowers. If you deadhead the flower spikes they will bloom prolifically all season. Cannas will grow best with lots of sun and moist soil. Cannas are planted only an inch or so deep. They grow from rhizomes not technically bulbs and the rhizomes grow horizontally. Being tropical they will not survive the winter in this part of the world unless you dig them up and store them in a dry dark cool place for the winter. They are easy to dig and to store and they will last forever and multiply with minor care. Of course you can leave them in the ground and buy new as desired. Planting must be after the soil is warm, late April to late May for best results. Cannas can do well in larger planters if kept moist.
